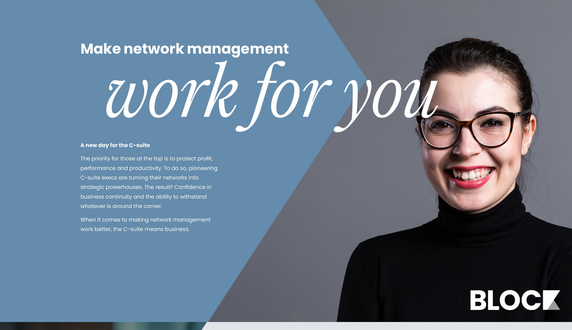
Make network management *work for you*

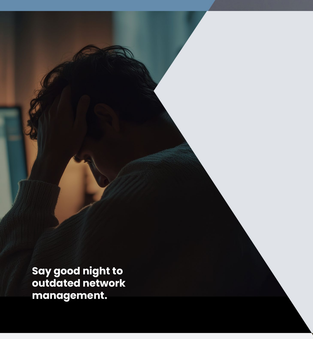


A new day for the C-suite

The priority for those at the top is to protect profit, performance and productivity. To do so, pioneering C-suite execs are turning their networks into strategic powerhouses. The result? Confidence in business continuity and the ability to withstand whatever is around the corner.

When it comes to making network management work better, the C-suite means business.

BLOCK



Say good night to outdated network management.

The C-suite has been losing sleep

On any given night, too many leaders are kept awake by the stresses of the working day. Is inferior infrastructure giving you nightmares?

- **Vulnerabilities inviting risk and the threat of disruption**
- **User demands outpacing legacy systems and resources**
- **Inadequate tech losing talent and lowering morale**

It's a new dawn for network management

- **More resilience against uncertainty**
- **More clarity across your network**
- **More control of your processes**

A redefined approach to network management thinks beyond computer network administration and maintenance and looks to better inform leadership teams, IT and engineers about their business.

This modern outlook is kickstarting business capability conversations and generating more value from transformation investments, helping digital ambitions to become a reality.

Mitigate risk

The outlook is bright for business continuity

By redefining network management, CIOs and CSOs can be confident in their organisation's resilience against uncertainty and disruption.

97%
reduction in attack surface through network-based segmentation.[1]

99.99%+
network availability for maximum reliability and uptime.[1]

Introducing Axiom

Block's Axiom platform is redefining network management for the better.

Axiom turns networks into strategic powerhouses to inform and support leadership teams, IT and engineers, and get businesses closer to achieving their digital ambitions.

With Axiom, your network works for you.

We are Block

Block was created for one reason: to empower people and inspire change through technology.

As the winner of Cisco UK&I Application Experience Partner of the Year, we believe better digital experiences can create a brighter future for people, organisations, society and our environment.
