

Make network management work for

everyone

including those responsible for its maintenance and improvement. To do so, enterprising engineers are turning their networks into strategic powerhouses. The result? More control over the type of work they do and how they go about completing tasks to the highest possible standard.

When it comes to making network management work better, IT engineers mean business.

BLOCK

IT engineers' talents are being dimmed

Too many IT engineers are having to spend their time on firefighting and maintenance, with bright ideas to support digital endeavours becoming overshadowed. Is your expertise being held back by inferior infrastructure?

Deadlines and quality slipping due to timeworn tech.

'Business as usual' duties draining resource.

High value tasks being sidelined.

Say good night to outdated network management.

It's a new dawn for network management

A redefined approach to network management thinks beyond network administration and maintenance and looks to better inform leadership teams, IT and engineers about their business.

More resilience against uncertainty

More clarity across your network

More control of your processes

This modern outlook is kickstarting business capability conversations and generating more value from transformation investments, helping digital ambitions to become a reality.

Simplify operations

Spark a change in planning and processes

Redefining network management means more streamlined workflows and better resource management, boosting the efficiency and productivity of IT engineers.

64%

of people say data insights have improved their companies' efficiency.¹

30%

reduction in common add/move tickets.²

Prioritise effectively

Ignite automated capabilities

With automation handling the repetitive and mundane tasks, IT engineers can focus on developing new technologies, improving system architecture and driving strategic initiatives.

52%

of people believe AI will help to advance their career growth and put them on the path to promotion.³

Introducing Axiom

Block's Axiom platform is redefining network management for the better.

Axiom turns networks into strategic powerhouses to inform and support leadership teams, IT and engineers, and get businesses closer to achieving their digital ambitions.

With Axiom, your network works for you.

Get in touch

Block was created for one reason: to empower people and inspire change through technology.

As the winner of Cisco UK&I Application Experience Partner of the Year, we believe better digital experiences can create a brighter future for people, organisations, society and our environment.
