

From analogue to digital: Powering the NHS with modern healthcare

networks

Building the digital foundations for
England's 10-Year Health Plan

BLOCK

Fit for the future

The newly published 10-Year Health Plan for England calls for a radical shift: from analogue to digital-first healthcare, from hospitals to neighbourhoods, and from sickness to prevention.

£4.7 billion

committed to NHS digital transformation

100% EPR

mandated by 2025

The goal

A single shared patient record accessible
across all care settings

Imagine a health system where clinicians can access real-time patient records anywhere. Where remote consultations are seamless. Where data flows securely between hospitals, GPs, community teams, and social care.

Why is network infrastructure so important for achieving this vision?

Your hospital network is the digital backbone that connects people, systems, and devices, from EPRs and imaging to remote consults and AI.

Right now, many networks are outdated, tangled, and tough to manage, making it hard to deliver fast, reliable, and secure care.

A modern network unlocks wireless-first, paperless healthcare. It's the invisible infrastructure that makes everything else work.

This isn't just a vision for the future, this is what your networks could already be supporting today.

The foundation for digital-first care

The Health Plan's promise of digital-first, patient-centred care isn't possible without strong, modern networks.

What the plan demands:

- ▶ Liberating clinicians from paperwork
- ▶ Single NHS App as "front door" for patients
- ▶ Seamless data sharing across ICS regions
- ▶ Integration of AI, remote monitoring, and predictive care

What the whitepaper explores:

- ▶ Reliable wi-fi everywhere
- ▶ Fast access to EPR at the bedside
- ▶ High-quality, secure virtual care
- ▶ Preparedness for AI and new tech
- ▶ Protected patient data and systems and more...

Where to start

The 'FutureNow Networks' whitepaper aims to arm you with essential knowledge for optimising your network. **Learn:**

The network's 9 clinical use cases

Real life examples from NHS Trusts

Essential compliance regulations to abide by

Where to focus your future budget
