

# Axiom

Network Management.  
Redefined.

## WINNER

of Cisco UK&I Application  
Experience Partner of the Year

**Helping you transform  
the chaotic tapestry of  
complex networks into  
unified, strategic assets.**

In the networking world, ensuring you have visibility of your assets, and any associated issues, without having to jump into multiple management platforms is impossible. Navigating security and compliance is a formidable challenge. The constant need to identify and address vulnerabilities can quickly become overwhelming and time-consuming. Managing the lifecycle of hardware and software presents its own set of hurdles, from ensuring compatibility to staying vigilant with patches.

What's evident across the board is the strain on teams, perpetually caught in the cycle of "keeping the lights on," even with the adoption of new architectures.

This firefighting leaves little room for proactive planning and future-oriented initiatives. Consequently, staff morale suffers, network availability fluctuates, and the delivery of clinical services becomes compromised.

That's why we've built Axiom, a platform designed to be a catalyst for change, taking the complexity out of managing the network, providing network managers with the visibility and insight they need to manage a secure, always-on network.

# Working on the Network v Working in the Network

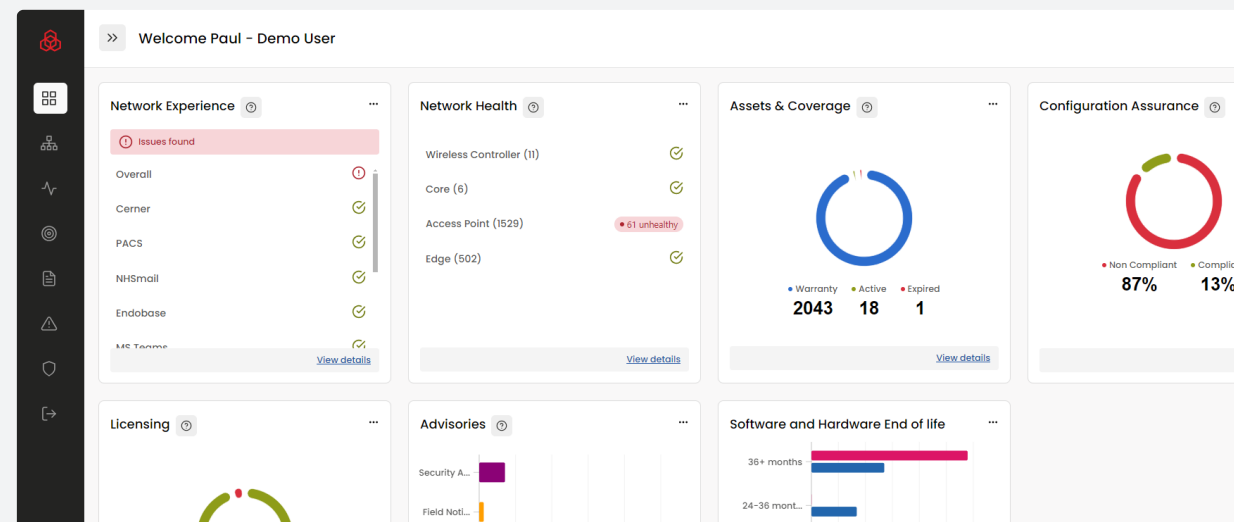

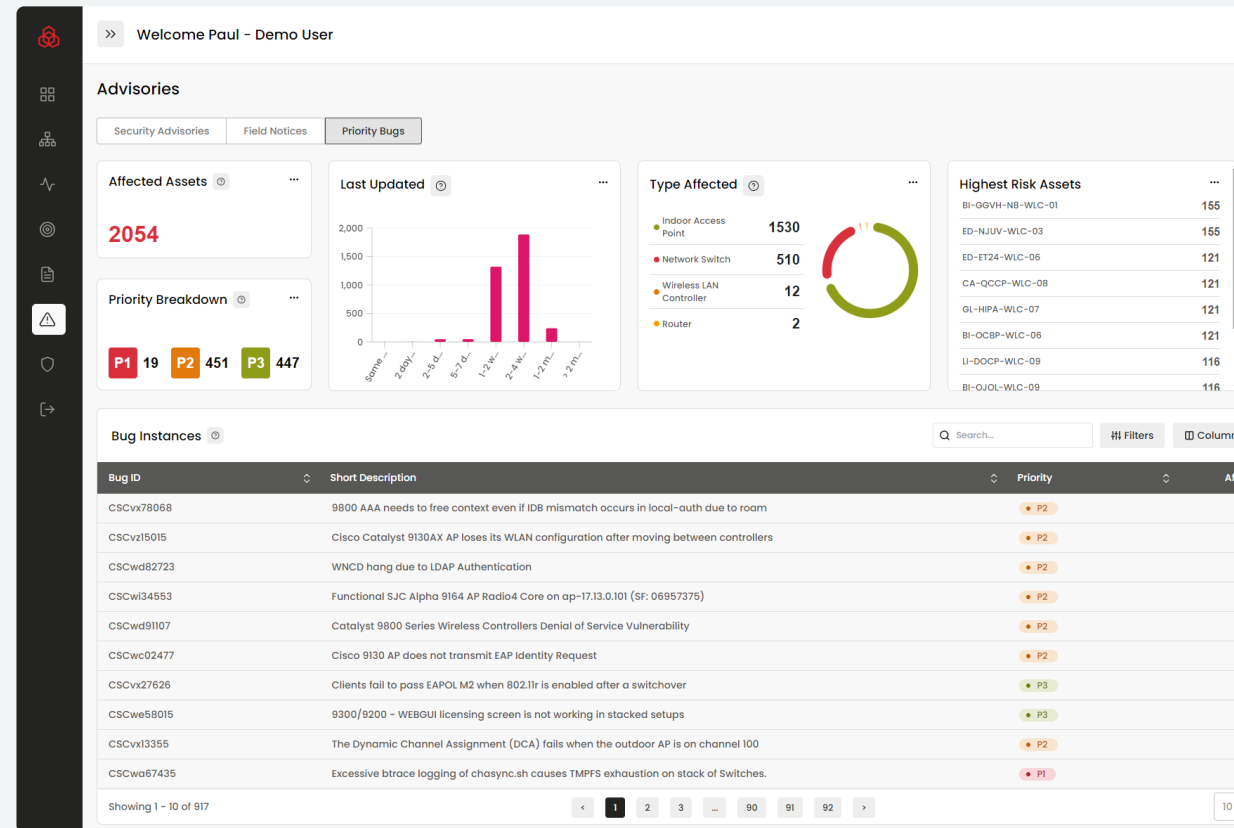

In the typical day of a network engineer, only 14% of their time is dedicated to strategic projects and service improvement, training and upskilling, and driving transformation and objectives.

The bulk of their time, approximately 86%, is spent working directly on the network. This includes handling repetitive tasks and tickets, managing complex infrastructure, and engaging in reactive troubleshooting and firefighting when issues arise. They also invest significant effort into managing hardware and software lifecycles, ensuring security and compliance standards are met, and tackling tactical project work such as setting up new offices or remote sites.

Axiom puts engineers in the driver's seat by automating routine processes and directing human expertise to high-value activities.

Axiom equips managers with the keys to proactively drive decisive actions, across your Cisco infrastructure.

Axiom offers executives a lens to see the path to reduced risk by protecting productivity, investments and performance.

# Turn your network into a **strategic powerhouse**.

When the future is digitally-driven, the way our IT needs are serviced becomes ever more critical. Axiom elevates service delivery by leveraging cutting-edge methodologies and a contemporary suite of tools.

Reduce complexity

Enhance security

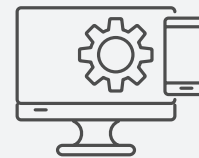

Simplify operations

Improve visibility

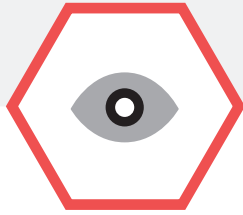

Prioritise effectively

Transform service

## Axiom. Insight.

**Assets** - A comprehensive picture of the assets on your network, and support contracts

**Licensing** - Easily see the consumption, compliance and expiry dates of your licenses

**Advisories** - Personalised advisory checks with recommendations

ITIC (Information Technology Intelligence Consulting) reports that the **average cost of network downtime is around £4500 per minute - £270,000 per hour.**

## Axiom. Assure.

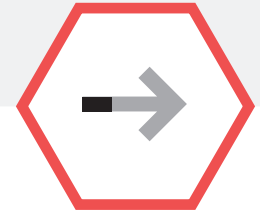

**Network Health** - A detailed view of device health across your network

**Network Experience** - Real-time visibility of the end user service experience

**Configuration Assurance** - Notification and reporting on compliance and deviation of best practice

By staying on top of software updates, bugs, and configuration compliance you **reduce your chances of unplanned outages by 67%**

## Axiom. Accelerate.

**ITSM Integration** - Service management linked to your own ticketing system

**AI Insights & Workflows** - Leverage the power of AI / ML to be more efficient and react faster

**Advanced Features** - Enhance your capabilities through tooling and automation

Introducing Auto-Port into Barts Health allowed us to guarantee port config compliance and **remove ~30% of their common add/moves tickets.**

**NO COST 3 month proof of concept for a limited time only. Interested?**
